

Sustainability 2022

Temmentec is located in the Emmental region in the heart of Switzerland, immersed between hills and forests, where a deep respect for the environment and a conscious use of natural resources is part of the DNA. With our commitment to act in a sustainable and ethical way, we make an important and continuous contribution to a greener future worth living in.

Sustainability in all its aspects is a core part of our company strategy and thus an integral part of all our processes and operations.

Certifications

- Temmentec AG is ISO14001 certified since 2011.
- Our company is RSPO (Roundtable on Sustainable Palm Oil) certified.

Energy and Ressources

- We do solely use electricity generated by hydropower.
- We are participating in a national program where we have committed ourselves to reduce the overall carbon dioxide output by 2% every year.
- All water used originates from a local spring and is treated and demineralized in-house.
- We are using the local district heating network to heat our premises.
- With our heat exchange system, we are transforming the natural heat and cold gained from the environment into energy which is used for heating and cooling of our production facilities.
- Thanks to substantial investments in digitalization of our processes, we will achieve a significant reduction of printouts and thus, a reduction of the overall paper consumption.
- Charging station for electric cars to enable and promote the change to e-mobility.

Waste management

- We have implemented a strict waste separation concept in all areas and waste quantity is reduced as much as possible.
- Special waste such as raw materials, bulks etc. is disposed of in accordance with a certified waste management system and handled by a specialized company.
- Continuous process improvements to reduce waste in all production steps.

Transportation and regionality

- Whenever external storage of goods is needed, we use storage facilities close to the factory to reduce transportation routes to a minimum.
- Flexible logistics processes enable our customers to reduce their ecological footprint by working with direct deliveries and by offering the possibility to store required materials close to the factory.
- For construction activities, we are collaborating with local craftsperson to support the local economy and to limit the emissions caused by transports to a minimum.

Together with all our partners, we are committed to manufacture Skin Care products fulfilling the highest standards in terms of quality as well as sustainability.
